

Outsourcing

BuildBIM is a design, drafting and BIM solutions provider for New Zealand and Australian construction industries. We provide a quality service that includes design, drafting and construction documentation, BIM coordination, clash detection, and 3D modelling. We offer fast turnaround times at competitive rates.

A New Zealand company with offices in Christchurch and Santiago Chile, we provide local expertise and the benefits of outsourcing, without the headaches. Our clients include homebuilders and construction companies, architects, developers, and product manufacturers.

Why Choose Us? Because of our flexibility, synergies through collaboration and a quality at a discount. While our Christchurch customer service team will be your first point of contact, our studio in Santiago, Chile allows us to offer expert skills from architects and technicians trained in Chile's top universities at a significantly lower price than other local alternatives.

BIM SOLUTIONS

BuildBIM provides building information models that are complete digital representations of a building design process. These models allow designers, contractors, developers, manufacturers and engineers to share data and construction information easily and efficiently, locating potential conflicts between different design plans. Models can also be utilized for Scheduling and Estimation purposes too. We offer complete BIM Coordinated Models which will assist in providing precise scheduling and quantities for estimation.

We convert 2D CAD files into 3D models, providing a better view of the building design and more sophisticated detailing accuracy. In addition, we can render high resolution interior and exterior views for presentations, brochures, banners and posters as well as fly thru video of your building. Our team has the skills and experience to transform your 2d drawings, Autocad plans, 3d Revit or Sketchup files into photo realistic visualizations

buildBIM

DESIGN & DRAFTING

BuildBIM Drafting offers full construction documentation services for both residential and commercial builds. We provide architectural and structural drafting services using Revit or Archicad platforms. You will liaise with our local professionals to develop your designs and other requirements while our offshore office will develop your documentation requirements. Our commercial clients benefit from our significant workload capacity and efficient turnaround times.

Our drafting clients are New Zealand and Australian homebuilding companies, development companies, architects and engineers. They benefit from buildBIM's flexible production capacity, fast turnaround times, quality service and competitive rates.
